

Cryptography & Network Security

(2015/11/9) Midterm I

	0	1	2	3
0	0	1	2	3
1	1	2	3	0
2	2	3	0	1
3	3	0	1	2

- Define the three security goals.
- List and define five security services.
- We have been told in arithmetic that the remainder of an integer divided by 8 is the same as the remainder of division of the rightmost three digits by 8. Use the properties of the mod operator to prove this claim.
- Using the extended Euclidean algorithm, find the greatest common divisor of the following pairs and the value of s and t.
 - 84 and 320
 - 400 and 60
- Find the multiplicative inverse of each of the following integers in \mathbb{Z}_{180} using the extended Euclidean algorithm.
 - 7
 - 132
- A post office sells only 39-cent and 15-cent stamps. Find the number of stamps (for 39-cent and 15-cent stamps, respectively) a customer needs to buy to put \$ 2.70 postage on a package. Find all possible solutions.
- The encryption key in a transposition cipher is (3, 2, 6, 1, 5, 4). Find the decryption key.
- Find all subgroups of the following groups:
 - $G = \langle \mathbb{Z}_{16}, + \rangle$
 - $G = \langle \mathbb{Z}_{16}^*, * \rangle$
- For the group $G = \langle \mathbb{Z}_4, + \rangle$, prove that it is an abelian group.
- Alice uses three consecutive permutations [1 3 2], [3 2 1], and [2 1 3].

$$(a_0 \times 10^0 \bmod 8) + (a_1 \times 10^1 \bmod 8) + (a_2 \times 10^2 \bmod 8) + (a_3 \times 10^3 \bmod 8)$$

$$8 = 2^3$$

$$10 = 2^1 \times 5^1$$

$$2cb \quad bca \quad cba \quad 180+90$$

inclive

$$540 + (-539) = 1$$

$$11, 26, 41, 56, 71, 86, 101, 116, 131, 146$$

$$(5, 5), (0, 18)$$

$$-36$$

$$390, 403, 429, 442$$

$$= 13 \times -35 = 455$$

$$455$$

$$468$$
